Summary of Sessions

In the provided chat session, the user inquires about the steps involved in implementing AI-driven regulatory compliance.

1. **Initial Phase (0-6 months):**

- The focus is on automating administrative tasks, including compliance reporting and data collection.
- This phase aims to capture quick wins by driving efficiency through automation.

2. **Long-term Phase (18 months and beyond):**

- The organization enters the Core AI stage.
- Systems are expected to autonomously monitor compliance and risk.
- There is a transition from manual processes to a self-operating system.
- The goal is to ensure real-time regulatory and risk management.

Overall, the conversation highlights a phased approach to implementing AI-driven regulatory compliance, starting with administrative automation and progressing to a self-operating system for real-time risk management.
